

Artificial Intelligence (AI) refers to the simulation of human intelligence in machines.

These machines are designed to think, learn, and make decisions like humans.

AI systems can be classified into three types: Narrow AI, General AI, and Super AI.

Narrow AI is designed to perform a specific task such as facial recognition or voice assistants.

General AI aims to perform any intellectual task that a human can do.

Super AI refers to intelligence that surpasses human capabilities.

Machine Learning is a subset of AI that enables systems to learn from data.

Deep Learning is a further subset that uses neural networks with many layers.

AI is widely used in healthcare, finance, transportation, and cybersecurity.
